

## Advantages of Using Light-Curable Maskants for Surface Protection

SpeedMask® infographic illustrates how temporary masking resins offer more reliable surface protection of components than traditional masking materials. Replace slow application methods such as tape, lacquer, and wax, as well as fixtures and boots.

Learn about the advantages of using light-curable maskants in this informative infographic. See a real life example of how switching from thermal tape to a SpeedMask® maskant saved one company 40,000 hours of labor a year. Share:

# ADVANTAGES OF USING LIGHT-CURABLE MASKANTS FOR SURFACE PROTECTION

## Easy, Instant Application

- No heating or mask preparation needed
- Numerous application methods available (i.e. spray, jet, bead dispense, coat)
- Less chance of application errors that result in edge-lift and leakage

## Conforms to Complex Shapes

- Reliable coverage on hard to mask parts
- Eliminates labor intensive application

## Solvent-Free, 100% Solids Masks

- Provides a greener process
- RoHS compliant

## Single Layer Coverage

- Less material used
- No waiting for layers to dry

## On-Demand Curing

- Cures typically <1 minute
- Immediate processing; no waiting

## Clean Removal From Non-Porous Surfaces

- Eliminates cleaning process
